AUSTIN, TX, January 20, 2011 – Green Revolution Cooling (GRC) and Signature Technology Group (STG) of Phoenix, Arizona, today announced a partnership to provide full warranty and support for servers, network equipment, and other hardware housed in GRC's CARNOTJET™ system fluid-submersion technology.

GRC is the leader in fluid-submersion cooling for the data center and STG supports over 200,000 hardware devices in the US in commercial and governmental data centers. This partnership will deliver highly efficient cooling and world-class server support as the companies aim to be leaders in supporting the next generation of efficient and low-cost data centers.

According to Steve McEvoy, STG's Chief Operating Officer, "STG is very pleased to have been chosen as the exclusive worldwide support partner for GRC. Their technology will enable our customers to save a significant amount of money on their energy costs, just as our services have been saving our customers money for the past twenty years. We look forward to a long and mutually beneficial business relationship and feel good that we are doing our part to help green the IT industry through this very important partnership."
