AUSTIN, TX, April 13, 2011 – A new video release from Green Revolution Cooling (GRC) features their largest fluid-submersion cooling installation to date, a four-rack 100kW CARNOTJET™ system at Midas Networks in Austin, TX.

Green Revolution Cooling's CARNOTJET™ system, twice named Disruptive Technology of the Year at SC'09 and SC'10, is a powerful end-to-end cooling system for data centers that leverages the power of GREENDEF™ fluid coolant, a non-conductive liquid with 1,200x the heat retaining capacity of air. The system can reduce data center cooling costs by 95% and total data center costs by 50%.

Since bringing the CARNOTJET™ system to market at SC'09, the company has gained several customers in the US and Europe, including three customers from the Top-50 supercomputing sites.

To view the new video on YouTube, please visit: <http://youtu.be/U5zoIEjo1Zk>
