TACC Doubles Down on Liquid Immersion Cooling, GRC Delivers Another Immersed HPC Cluster Solution

Green Revolution Cooling today announced that it will be delivering a custom GPU-based cluster to the Texas Advanced Computing Center. TACC has been a long-time advocate and user of GRC's immersion cooling technology dating all the way back to 2009, when the technology was first brought to market. The installation has expanded over the years to include more racks and this new order will further build on the existing deployment.

GRC's Oil Immersion Cooling System at PIC Supports Data Processing for The Large Hadron Collider at CERN

PIC in Barcelona, Spain shares key performance and reliability results from its immersion cooled data-intensive cluster.

Liquid Immersion Cooling from Green Revolution Cooling helps Tokyo Institute of Technology Achieve Top Honors at Green500 Three Years in a Row

The latest Green500 list of most efficient supercomputers in the world was announced during the SC15 conference in Austin, Texas. For the third consecutive year, the Green Revolution Cooling-powered Tsubame-KFC supercomputer at Tokyo Institute of Technology has achieved top honors, this year ranking as the most efficient commercially available setup, and second overall.

Green Revolution Cooling's Oil Immersion Cooling Technology Helps Vienna Scientific Cluster Achieve a mPUE of 1.02 with Zero Water Use

VSC-3, the third iteration of the Vienna Scientific Cluster, is reporting a mechanical Power Utilization Effectiveness (mPUE) of 1.02 as of the end of Q1 2015, making it one of the most efficient data center facilities in the world.
